Create Repository

Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository.](#)

Required fields are marked with an asterisk ().*

Owner *

Repository name *

YourNameCpp

✔ YourNameCpp is available.

Great repository names are short and memorable. Need inspiration? How about [super-duper-sniffle](#) ?

Description (optional)

Public

Anyone on the internet can see this repository. You choose who can commit.

Private

You choose who can see and commit to this repository.

Initialize this repository with:

Add a README file

This is where you can write a long description for your project. [Learn more about READMEs.](#)

Add .gitignore

.gitignore template:C++ ▾

Choose which files not to track from a list of templates. [Learn more about ignoring files.](#)

Choose a license

License:None ▾

A license tells others what they can and can't do with your code. [Learn more about licenses.](#)

This will set main as the default branch. Change the default name in your [settings](#).

You are creating a public repository in your personal account.

Clone 클릭

7. .gitignore 커밋 & push

.gitignore 파일이 있는 사람들은 제외!
없는 분들만 따라해 주시면 됩니다.

1. 6번 페이지에서 입력했던 Local Path로 이동
2. .gitignore 파일 추가 (해당 pdf 있는 경로에 있는 .gitignore)
